Per utilitzar vagrant primer de tot s'ha de instalar:

Utilitzarem les comandes:

```
vib@vib2022:~$ curl -fsSL https://apt.releases.hashicorp.com/gpg | sudo apt-key
add -
[sudo] contraseña para vib:
OK
vib@vib2022:~$ sudo apt-add-repository "deb [arch=amd64] https://apt.releases.ha
shicorp.com $(lsb release -cs) main'
Obj:1 http://es.archive.ubuntu.com/ubuntu focal InRelease
Obj:2 http://es.archive.ubuntu.com/ubuntu focal-updates InRelease
Obj:3 http://es.archive.ubuntu.com/ubuntu focal-backports InRelease
Obj:4 http://es.archive.ubuntu.com/ubuntu focal-security InRelease
Des:5 https://apt.releases.hashicorp.com focal InRelease [9.495 B]
Des:6 https://apt.releases.hashicorp.com focal/main amd64 Packages [48,4 kB]
Descargados 57,8 kB en 4s (15,6 kB/s)
Leyendo lista de paquetes... Hecho
vib@vib2022:~$ sudo apt-get update && sudo apt-get install vagrant
Obj:1 http://es.archive.ubuntu.com/ubuntu focal InRelease
```

I ara podrem executar el vagrant al nostre gust. Ara isntalarem un bento/devian per exemple, i ens mostrara un missatge de error dient-nos que exostex el fitxer «Vagrantfila». L'eliminem. Despres si que podra obtenir-lo. I seguidament el pujem amb «vagrant up», i començara la instalació:

```
alumne@aco02-15:-$ vagrant init bento/debian-10.11-i386 --box-version 202112.19.

Vagrantfile' already exists in this directory. Remove it before
running 'vagrant init'.

alumne@aco02-15:-$ rm Vagrantfile
alumne@aco02-15:-$ vagrant init bento/debian-10.11-i386 --box-version 202112.19.

A 'Vagrantfile' has been placed in this directory. You are now
ready to 'vagrant up' your first virtual environment! Please read
the comments in the Vagrantfile as well as documentation on
'vagrantup.com' for more information on using Vagrant.

alumne@aco02-15:-$ vagrant up
Bringing machine 'default' up with 'virtualbox' provider...

==> default: Box 'bento/debian-10.11-i386' could not be found. Attempting to fin d
and install...

default: Box Provider: virtualbox
default: Box Version: 202112.19.0

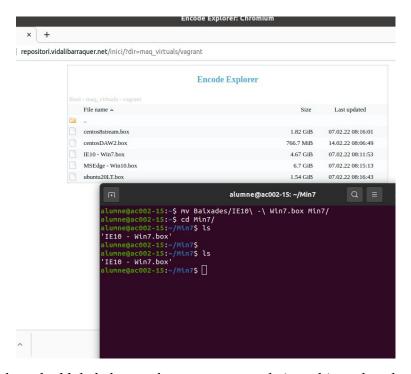

==> default: Loading metadata for box 'bento/debian-10.11-i386'
default: URL: https://vagrantcloud.com/bento/debian-10.11-i386

==> default: Adding box 'bento/debian-10.11-i386' (v202112.19.0) for provider: v
irtualbox
default: Downloading: https://vagrantcloud.com/bento/boxes/debian-10.11-i386
/versions/202112.19.0/providers/virtualbox.box
Progress: 0% (Rate: 233k/s, Estimated time remaining: 0:29:49)
```

I ara en el virtualbox es mostrara:

Ara per utilitzar el vagrant amb un arxiu .box, primer el descarguem i l'inserim en una carpeta aprart per si acas:

Ara, inseridem el add de la box amb aquesta comanda i cambiem els valors de «IE10 – Win7.box» per el nom del box que heu descarrregat:

```
alumne@ac002-15:~/Min7$ vagrant box add --name Win7 /home/alumne/Min7/'IE10 - Win7.box'
==> box: Box file was not detected as metadata. Adding it directly...
==> box: Adding box 'Win7' (v0) for provider:
box: Unpacking necessary files from: file:///home/alumne/Min7/IE10%20-%20Win7.box
Progress: 9% (Rate: 103M/s, Estimated time remaining: 0:00:41)
```

Ara al tindre-l, mirarem la llista de la box, i farem un init per pujar-lo amb el nom que surt, i seguidament el pujarem amb un «vagrant up»:

```
valumne@ac002-15:-/Min7$ vagrant box list
Win7 (virtualbox, 0)
[alumne@ac002-15:-/Min7$ vagrant init Win7
A 'Vagrantfile' has been placed in this directory. You are now
ready to 'vagrant up' your first virtual environment! Please read
the comments in the Vagrantfile as well as documentation on
'vagrantup.com' for more information on using Vagrant.
alumne@ac002-15:-/Min7$ vagrant up
Bringing machine 'default' up with 'virtualbox' provider...
==> default: Importing base box 'Win7'...
Progress: 10%
```

I tot seguit es mostrara en el virtualbox
